Builder | Cybersecurity Professional
UAE-ready enterprise software ecosystem

Prepared for company owners, executives, and
decision makers. Designed for clear business
discussion, product demos, and investment-
style evaluation.

Executive Summary

Aura Command is a commercial SaaS product built for businesses that need stronger visibility, workflow control, automation, reporting, and security without turning every improvement into a custom development project.

Turn WhatsApp conversations and lead follow-up into a measurable revenue operations system.

Target Audience

Company owners, sales directors, real estate teams, service businesses, and operations managers handling leads through WhatsApp, website forms, and CRM systems.

Business Outcome

- Every lead has an owner, status, source, SLA, and follow-up path.
- Managers see revenue pipeline, conversion trends, missed opportunities, and team activity.
- Sales agents get AI reply suggestions and next-best-action guidance.
- Owners get a Revenue Operations Health Score that is understandable in under 30 seconds.

Business Problems Solved

Leads arrive from WhatsApp, website forms, referrals, and CRM channels but ownership is unclear.

Slow replies and missed follow-ups quietly reduce revenue.

Management cannot see pipeline health, agent performance, or missed opportunities in one place.

CRM sync and reporting often depend on manual spreadsheets.

What Makes It Enterprise-Ready

Multi-Tenant SaaS

Each customer gets a separate workspace with scoped users, settings, subscriptions, reports, integrations, and audit activity.

Subscription Foundation

Starter, Business, and Enterprise plans support feature gating, usage limits, billing events, and upgrade paths.

Security First

RBAC, audit trails, secure API keys, tenant isolation, retention policies, webhook verification, and enterprise SSO-ready structure.

Core Product Modules

The product is organized around business workflows rather than isolated dashboard widgets. Each module exists to improve revenue, productivity, visibility, security, automation, or executive decision making.

Shared WhatsApp Inbox

Centralize customer conversations, assignment, priority, and status tracking for sales teams.

Lead Pipeline

Track inquiry lifecycle from New to Assigned, Conversation, Follow-up, Won, Lost, and Closed.

Missed Lead Detector

Highlight leads with no response or overdue follow-up before revenue is lost.

AI Sales Copilot

Generate summaries, suggested replies, sales notes, and follow-up recommendations.

Revenue Analytics

Measure pipeline value, conversion rate, response speed, and agent productivity.

Integration Studio

Connect CRM, website forms, WhatsApp Business API, Google Sheets, Zapier, Make, n8n, and custom APIs.

How The Workflow Works

The customer can start in standalone mode with manual records and demo data, then add integrations when the business is ready. Integrations enhance the workflow but are not required for daily use.

- 1 Lead is created from WhatsApp, website form, CRM, API, or manual entry.
- 2 Aura assigns an agent based on rules, capacity, source, or manager choice.
- 3 SLA timer starts and the shared inbox keeps the conversation visible.
- 4 AI summarizes the customer need and suggests a reply or next best action.
- 5 Follow-up task is created automatically when the lead needs a future touch.
- 6 Manager reviews pipeline health, conversion, missed opportunities, and revenue forecast.

Standalone Mode

Use the product immediately with manual records, internal users, dashboards, reports, demo data, onboarding, and built-in workflows.

Integrated Mode

Connect external systems through Integration Studio, API keys, OAuth apps, webhooks, data mapping, workflow triggers, and integration logs.

Tenant Provisioning

Customer Pays

Checkout starts the subscription flow. Paid features are unlocked only after verified backend payment confirmation.

Workspace Created

The tenant workspace is created with product-specific settings and isolated customer data scope.

Roles Created

Owner, Admin, Manager, Analyst, Agent, and Viewer access patterns are prepared for the customer team.

Onboarding Starts

Demo data loads, subscription activates, and the guided onboarding checklist helps users reach value quickly.

Executive Dashboard & Health Score

The executive dashboard is designed for owners and management to understand the business condition quickly. It separates daily operational work from leadership-level decisions.

Revenue Operations Health Score

Green: 80-100. Yellow: 60-79. Red: 0-59. The score appears in dashboards, reports, monthly summaries, email report structure, and AI summaries.

Score Factors

- Average lead response time
- Missed leads
- Follow-up completion rate
- Lead conversion rate
- Agent activity
- Pipeline velocity
- CRM sync success rate
- Customer engagement rate

Executive KPIs

- Pipeline Value
- Active Leads
- Lead Conversion Rate
- Team Performance
- Missed Opportunity Alerts
- Revenue Forecast

AI Copilot

The AI assistant is contextual to Aura Command. It supports summaries, recommendations, risk signals, reporting assistance, and next actions inside the product workflow rather than acting as a generic chatbot.

Integration Studio

Integration Studio gives admins one place to manage external systems, API access, webhooks, logs, event triggers, and data mapping.

Marketplace

Browse available CRM, ERP, SIEM, storage, email, workspace, automation, and custom API connectors.

Data Mapping

Map external fields into product fields, such as CRM `first_name` to an internal customer field, reducing integration pain.

Webhook Builder

Create outbound event notifications with delivery logs, retry visibility, and signature-ready architecture.

API Key Management

Generate scoped API keys, monitor usage, rotate keys, and revoke access when needed.

Supported Integration Categories

WhatsApp Business API

HubSpot

Zoho CRM

Salesforce

Pipedrive

Website Forms

Email

Google Sheets

Zapier

Make

n8n

Custom CRM API

Enterprise Controls

SSO Ready

Enterprise tier structure for SAML, Azure AD, Microsoft Entra, Google Workspace, and Okta.

Audit Center

Track who changed what, when, from where, and previous/new values for sensitive actions.

Retention Policies

Support for 30-day, 90-day, 1-year, and custom retention, archive, and backup policies.

Subscription Tiers

The product supports a growth path from small business use to enterprise deployment without changing the core architecture.

Starter

Up to 3 users, shared inbox, lead pipeline, basic reports, AI summaries, notifications, Revenue Health Score, Executive Dashboard Lite.

Business

Up to 25 users, CRM integrations, workflow automation, lead scoring, team analytics, scheduled reports, API access, webhooks, forecasting.

Enterprise

Unlimited users, SSO-ready structure, white label, multiple WhatsApp channels, custom integrations, advanced workflows, custom reports, dedicated onboarding.

Why Owners Care

Revenue: clearer conversion, fewer missed actions, better follow-up, stronger reporting.

Productivity: teams work from one system instead of scattered files, chats, and spreadsheets.

Visibility: executives see KPIs, risks, forecasts, health scores, and recommendations.

Security: tenant isolation, RBAC, audit trails, API controls, and enterprise policies.

Demo Agenda For Company Owners

This agenda keeps the product demo focused on business value, not just screens.

- 1 Show owner dashboard
- 2 Open shared inbox
- 3 Assign lead
- 4 Trigger follow-up
- 5 Review missed opportunities
- 6 Explain health score
- 7 Show Integration Studio data mapping

Implementation Discussion

Day 1

Create workspace, invite users, enable demo data, review dashboard, and confirm business workflow.

Week 1

Configure roles, reports, onboarding, key workflows, import initial records, and validate security settings.

Weeks 2-4

Connect priority integrations, data mapping, webhooks, scheduled reports, and executive views.

Enterprise Phase

SSO, white label, custom domain, custom reporting, retention policies, integration logs, and advanced automation.

Positioning Statement

Aura Command is positioned as a commercial SaaS product for real business operations, with standalone use, integration-ready architecture, subscription tiers, executive dashboards, health scoring, AI assistance, and security-first design.
