

COMMERCIAL SAAS PRODUCT BROCHURE

Siteflow

AI Construction Operations & Site Management Platform

Standalone-ready

Integration-ready

Subscription-ready

Security-first

Executive dashboards

Bring projects, contractors, site reports, materials, safety, approvals, and executive visibility into one construction operations platform.

Hamees Momin

Full-Stack Software Engineer | SaaS Product Builder | Cybersecurity Professional
UAE-ready enterprise software ecosystem

Prepared for company owners, executives, and decision makers. Designed for clear business discussion, product demos, and investment-style evaluation.

Executive Summary

Siteflow is a commercial SaaS product built for businesses that need stronger visibility, workflow control, automation, reporting, and security without turning every improvement into a custom development project.

Bring projects, contractors, site reports, materials, safety, approvals, and executive visibility into one construction operations platform.

Target Audience

Construction company owners, real estate developers, project managers, consultants, contractors, site engineers, and operations teams in the UAE.

Business Outcome

- Site teams manage daily reports, snags, photos, materials, approvals, and contractors in one workspace.
- Project managers see delay risks, budget variance, milestone status, and contractor performance.
- AI generates daily summaries and management-ready status updates.
- Owners get a Project Health Score and forecast completion view.

Business Problems Solved

Daily site progress, photos, snags, materials, approvals, safety, and contractor updates are often spread across WhatsApp, Excel, email, and paper.

Owners need simple visibility into budget, timeline, quality, safety, and delay risk.

Contractor performance is hard to measure consistently.

Client-ready reporting takes too long at the end of each week or month.

What Makes It Enterprise-Ready

Multi-Tenant SaaS

Each customer gets a separate workspace with scoped users, settings, subscriptions, reports, integrations, and audit activity.

Subscription Foundation

Starter, Business, and Enterprise plans support feature gating, usage limits, billing events, and upgrade paths.

Security First

RBAC, audit trails, secure API keys, tenant isolation, retention policies, webhook verification, and enterprise SSO-ready structure.

Core Product Modules

The product is organized around business workflows rather than isolated dashboard widgets. Each module exists to improve revenue, productivity, visibility, security, automation, or executive decision making.

Project Dashboard

Track milestones, timelines, budgets, contractors, risks, and project status.

Daily Site Reports

Capture progress, manpower, weather, site conditions, photos, and notes.

Snag & Punch List Tracking

Assign responsibility, severity, due dates, photos, and closure evidence.

Contractor Management

Track contractors, performance, tasks, safety issues, and delivery quality.

Materials & Approvals

Manage material requests, deliveries, budget variance, RFIs, submittals, and approvals.

Client-Ready Reports

Generate executive and client-friendly PDF reports from project data.

How The Workflow Works

The customer can start in standalone mode with manual records and demo data, then add integrations when the business is ready. Integrations enhance the workflow but are not required for daily use.

- 1 Project is created with contractor, client, budget, milestone, and team information.
- 2 Site engineer submits daily report with photos, progress, safety, and material updates.
- 3 Snags, issues, approvals, and material requests are assigned to responsible parties.
- 4 AI produces a daily project summary and flags delay or safety risks.
- 5 Managers review budget variance, timeline variance, and contractor rankings.
- 6 Client-ready report is exported or scheduled for stakeholders.

Standalone Mode

Use the product immediately with manual records, internal users, dashboards, reports, demo data, onboarding, and built-in workflows.

Integrated Mode

Connect external systems through Integration Studio, API keys, OAuth apps, webhooks, data mapping, workflow triggers, and integration logs.

Tenant Provisioning

Customer Pays

Checkout starts the subscription flow. Paid features are unlocked only after verified backend payment confirmation.

Workspace Created

The tenant workspace is created with product-specific settings and isolated customer data scope.

Roles Created

Owner, Admin, Manager, Analyst, Agent, and Viewer access patterns are prepared for the customer team.

Onboarding Starts

Demo data loads, subscription activates, and the guided onboarding

checklist helps users reach value quickly.

Siteflow

Workflow & Provisioning

Executive Dashboard & Health Score

The executive dashboard is designed for owners and management to understand the business condition quickly. It separates daily operational work from leadership-level decisions.

Project Health Score

Green: 80-100. Yellow: 60-79. Red: 0-59. The score appears in dashboards, reports, monthly summaries, email report structure, and AI summaries.

Score Factors

- Budget variance
- Timeline variance
- Open site issues
- Contractor performance
- Safety incidents
- Inspection completion
- Material delays
- Milestone completion

Executive KPIs

- Budget Performance
- Timeline Performance
- Delay Risks
- Contractor Rankings
- Safety Overview
- Forecast Completion Date

AI Copilot

The AI assistant is contextual to Siteflow. It supports summaries, recommendations, risk signals, reporting assistance, and next actions inside the product workflow rather than acting as a generic chatbot.

Integration Studio

Integration Studio gives admins one place to manage external systems, API access, webhooks, logs, event triggers, and data mapping.

Marketplace

Browse available CRM, ERP, SIEM, storage, email, workspace, automation, and custom API connectors.

Data Mapping

Map external fields into product fields, such as CRM `first_name` to an internal customer field, reducing integration pain.

Webhook Builder

Create outbound event notifications with delivery logs, retry visibility, and signature-ready architecture.

API Key Management

Generate scoped API keys, monitor usage, rotate keys, and revoke access when needed.

Supported Integration Categories

ERP

Procurement Tools

Accounting Systems

Real Estate CRM

Google Drive

SharePoint

Email

Custom API/Webhooks

Enterprise Controls

SSO Ready

Enterprise tier structure for SAML, Azure AD, Microsoft Entra, Google Workspace, and Okta.

Audit Center

Track who changed what, when, from where, and previous/new values for sensitive actions.

Retention Policies

Support for 30-day, 90-day, 1-year, and custom retention, archive, and backup policies.

Subscription Tiers

The product supports a growth path from small business use to enterprise deployment without changing the core architecture.

Starter

Projects, daily reports, contractors, site photos, materials tracking, Project Health Score, Executive Dashboard Lite.

Business

Budget tracking, approval workflows, timeline management, client reporting, API access, AI project summaries, scheduled reports.

Enterprise

ERP/procurement integrations, multi-company management, white label, advanced analytics, custom workflows, executive reporting suite.

Why Owners Care

Revenue: clearer conversion, fewer missed actions, better follow-up, stronger reporting.

Productivity: teams work from one system instead of scattered files, chats, and spreadsheets.

Visibility: executives see KPIs, risks, forecasts, health scores, and recommendations.

Security: tenant isolation, RBAC, audit trails, API controls, and enterprise policies.

Demo Agenda For Company Owners

This agenda keeps the product demo focused on business value, not just screens.

- 1 Open project dashboard
- 2 Create daily report
- 3 Review snag list
- 4 Show material request
- 5 Generate AI project summary
- 6 Review Project Health Score
- 7 Export client report

Implementation Discussion

Day 1

Create workspace, invite users, enable demo data, review dashboard, and confirm business workflow.

Week 1

Configure roles, reports, onboarding, key workflows, import initial records, and validate security settings.

Weeks 2-4

Connect priority integrations, data mapping, webhooks, scheduled reports, and executive views.

Enterprise Phase

SSO, white label, custom domain, custom reporting, retention policies, integration logs, and advanced automation.

Positioning Statement

Siteflow is positioned as a commercial SaaS product for real business operations, with standalone use, integration-ready architecture, subscription tiers, executive dashboards, health scoring, AI assistance, and security-first design.
